SUBJECT: UL Approval of Central Vac Outlet

Dear Sir/Madam,

The Canplas Industries Ltd Central Vacuum "Electravalue®" is listed by Underwriters Laboratories, in file number E150280 and E184142.

The 1999 National Electrical Code reference for Central vacuum Outlets is in Article 422-15 Central Vacuum Outlet Assemblies.

The section explains that a ground wire is required where there is exposed non-current carrying metal parts. The Canplas Vaculine Electravalue® has no exposed non current carrying metal parts, and the conductors are encapsulated in the UL approved two pin plug. (See the recognized component marking on the face of the plug).

The Code is written this way because the only other manufacturer of this product Hayden® Supervalve has exposed current carrying metal parts and therefore does require a ground wire.

The UL Type A Valve (referenced in UL Standard 1017 for Vacuums) is visible on the underside of the "Electravalue" cover after the entire assembly is installed.
